

Milestone 2

Remington Greok, Tyler Gutowski, Spencer Hirsch, Thomas Johnson

March 1, 2023

1 Assignment Goal

This assignment is to help you belong to a team either as a leader or a member. Search the terms "team leader" and "team member" to learn about these tools to get advice on *teamwork*.

In particular, for this course, you will learn about tools that support software development and collaboration. Here is a partial list of tools you may want to use.

- Microsoft Teams Find resources to learn about *Microsoft Teams*. You can access Teams software through the Florida Tech website.
- GitHub is perhaps the default site for collaborative software development. You should be able to find resources to learn about and use GitHub.
- Trello is another site you may find useful.
- There are many other tools to help collaboration in the development of computer science/software engineering solutions to problems. If there is some you like, let me know.

2 Tasks for this Assignment

- For a team of 2 or 3 students enrolled in this course. (A team of 4 may be allowed but must be justified and approved by the instructor.) I believe I've had Canvas set up teams.
- A a team, write a report following this outline:

1. *Your name?*

Spencer Hirsch

2. *Your teammates' names?*

Remington Greko, Tyler Gutowski, and Thoams Johnson.

3. *Did you consider using development tools other than ones mentioned above? If so, what were they?*

No, for the development tool, we will be using GitHub, it is a tool that we are all very familiar with and we will continue using it.

4. *Describe the team work tool you and your teammates have decided to use. If there are multiple options, outline them.*

We are all very familiar with Discord, for this reason we have set up a group to communicate in with respect to the assignments for this class. Discord is a very useful tool for communicating as it allows for multiple platforms and we are all very responsive on it.

5. *Why did you choose the software development tool you plan to use in senior projects?*

As mentioned above, we have decided that we will use GitHub while working on our project. We have all been using GitHub for a while now and are very familiar with Git and how it works. We believe that this will be the best course of action for the group.

3 Submitting your report

Submit your report on Canvas. I expect each team member to submit the same report.
